

Blowfish Racing Shift Bracket install

Parts used for the install with an MGW shifter.

With the MGW you will reuse the two post bracket. Attach the two post bracket to the Blowfish adapter bracket.

The MGW two post bracket will be re-installed, but you would install it upside down so the Blowfish adapter bracket is facing down.

Next slide the upper bracket in position and connect the upper bracket to the blowfish adapter bracket. Just get them started and move on to connecting the upper and lower bracket together. (But do not tighten, just get them started.) Once that is done go back and tighten the upper bracket and adapter bracket according to the instructions.

Next tighten the upper and lower bracket together according to the instructions.
